Super Ball Bushing™ Bearings

(Closed Type) for End-Supported Applications

Load/Life Graph (Lines indicate limiting load for given BALL BUSHING bearing)

Required Travel Life (millions of inches)

Determining BALL BUSHING Bearing Size

To determine the proper BALL BUSHING bearing size, enter the chart with the maximum load of the most heavily loaded bearing and the required travel life. Mark whore the two lines. intersect, All BALL BUSHING bearing sizes that pass through or above and to the right of this point may be suitable for this application

Note: For the purpose of using this chart:

Load on Most Heavily Maximum Applied Load Loaded Rearing where

K. = the Load Correction Factor, which can be determined from the Polar Graph below

Dynamic Load Capacity Correction Factor, K.

The Dynamic Load Capacity is based on a rated travel life of 2 million inches. The actual Dynamic Load Capacity can be affected by the orientation of the bearing or the direction of the applied load. For dynamic load Correction Factors, see polar graphs below Polar Graphs

The actual Dynamic Load Capacity of a BALL BUSHING bearing is determined by the prientation of the bearing or direction of the applied load. The load Correction Factor K. is found by knowing the direction of the applied load relative to the orientation of the bearing's ball tracks and referring to the polar graph. To determine the actual Dynamic Load Canacity, multiply the
